

ITS AMS Community of Practice Initial Meeting – Panel Discussion

DOT Perspective

Sanhita Lahiri, P.E., PTOE
Central Office, Traffic Operations Division

December 4, 2025

Why we need ITS AMS CoP?

- Discuss as a Community our needs in this emerging area of Traffic Engineering PLUS Technology
- Find areas of common woes
- Learn from each other and see
 - What can we solve based on what has already been done?
 - What can we **NOT** solve currently, but with research there is potential?
 - What must be left for a longer-term resolution, in which case what is our alternative?

What does DOTs need in the ecosystem of ITS AMS?

- Find ways to engage OEMs in simulation discussions
- Use AMS to Operationalize CAV deployments
- Assess Digital Twin Readiness
- Quantify ROI for modeling, and ways to incentivize executive management to spend funds to perform accurate modeling
- Identify the tipping point for switch to big-data modeling – ML/AI (from traditional traffic engineering models).
 - Different Data types
 - Different modeling approach
 - Shift in investment

What does DOTs need in the ecosystem of ITS AMS?

- **Guidance that agencies are providing, what is appropriate and what requires more research? There is a need for software/platform-based guidance on the following:**
 - **TSMO modeling**
 - **Incorporating CAV modeling – the current traditional traffic engineering softwares is unable to account for specific CAV vehicle parameters, how to solve the problem**
 - **Training for modeling communication – RSUs, Signals**
 - **Using emerging data sources including high resolution data for modeling – do's/don'ts**

What does DOTs need in the ecosystem of ITS AMS?

- **Issues with Information Technology Divisions:**
 - How to engage them?
 - Inform them in a way that assuages their concerns of security
 - Training for IT staff

Open Discussion

What are Other DOT's facing?

Questions??
